CISOPrime™

CYBER & AI RISK GOVERNANCE AND ASSURANCE

Powered by Agentic Decision Intelligence

From Governance to Assurance

Connect risk intelligence to accountable decisions, risk treatment, continuous assurance, and evidence-supported outcomes.

More signals. Less clarity.

Disconnected tools and evidence obscure business exposure and priorities.

Decisions without ownership.

Risks are reported, but approvals, actions, and accountability are fragmented.

Activity without proof.

Audit readiness and remediation status do not alone demonstrate risk reduction.

WHAT WE ENABLE

Turn risk intelligence into action—and evidence of results.

A connected approach to cyber and AI governance for security leaders, regulated enterprises, and advisory partners.

01 / RISK INTELLIGENCE

Prioritize risk in business terms

Bring security signals and evidence into context. Prioritize exposures and model potential financial impact using explicit assumptions.

02 / ACCOUNTABLE DECISIONS

Make decisions you can defend

Translate findings into evidence-backed recommendations, human-approved decisions, clear owners, and traceable actions.

03 / CONTINUOUS ASSURANCE

Move beyond audit checklists

Connect controls, treatment plans, and ongoing evidence to assess effectiveness and substantiate outcomes—not just completion.

04 / INTEGRATED GOVERNANCE

Govern cyber and AI risk together

Support compliance, vendor risk, and AI governance with evidence mapped across 40+ frameworks, including NIST, ISO, SOC 2, and AI RMF.

THE GOVERNANCE-TO-ASSURANCE LIFECYCLE

One connected path from evidence to verified outcomes

Decisions remain human-accountable. Outcomes are verified only when supported by sufficient evidence.

1. **Evidence** — Signals & proof
2. **Risk Intelligence** — Priorities & impact
3. **Governance Decision** — Human approval
4. **Accountability** — Owners & rationale
5. **Risk Treatment** — Actions & progress
6. **Continuous Assurance** — Effectiveness checks
7. **Verified Outcomes** — Evidence of results

WHY CISOPRIME

Intelligence with evidence. Governance with accountability.

- ✓ **Evidence-bounded agentic intelligence** — AI insights and recommendations tied to identifiable sources, with assumptions and limits made clear.
- ✓ **Human-owned governance** — Documented approvals, responsibilities, and decisions—not autonomous risk acceptance.
- ✓ **Continuous effectiveness assessment** — Track whether risk treatment is working, with evidence that supports the conclusion.
- ✓ **Executive-ready assurance** — Connect posture, exposure, decisions, progress, and confidence in board-level reporting.

Advisory expertise + an integrated governance and assurance platform

Auxgens brings cybersecurity advisory and governance services; CISOPrime provides the technology to connect risk evidence, decisions, treatment, and assurance. Together, they help clients operationalize governance and demonstrate results.

Make cyber and AI risk decisions count.
